1. Project Overview

Festivo is a full-stack web application designed to revolutionize the event planning industry in India. It serves as a digital bridge between two key user groups: **customers** who want to plan events (weddings, corporate functions, birthdays, anniversaries) and **vendors** who provide event services (venues, catering, photography, decoration, entertainment, and coordination).

The platform provides a seamless, end-to-end experience — from discovering vendors and comparing prices, to booking services with secure online payments, to managing bookings through dedicated dashboards. Every interaction is designed to be intuitive, visually stunning, and trustworthy.

Key Highlights

- **Dual-role system** — Users sign up as either Customers or Vendors, each with a tailored experience
- **Full booking pipeline** — Browse, compare, book, pay, and confirm — all within the platform
- **Real-time vendor data** — All vendor listings, ratings, and availability are stored in a live database
- **Animated showcase** — An Explore page with auto-playing slideshows, 3D tilt cards, and parallax scrolling
- **Secure authentication** — Email/password auth with Supabase, profiles, and role-based access control
- **Mobile-first design** — Fully responsive across all viewport sizes from 390px to 1440px+

Mission Statement

Festivo aims to eliminate the chaos, opacity, and unreliability of traditional event planning by providing a transparent, verified, and instant booking platform where every celebration is handled with professional care.

Figure 1.1 — Festivo Homepage Hero Section

2. Problem Statement & Solution

The event planning industry in India faces several systemic challenges that Festivo directly addresses:

Problem 1: Fragmented Vendor Discovery

Customers rely on word-of-mouth, scattered social media pages, or offline brokers to find vendors. There is no single reliable platform to discover, compare, and verify service providers.

Festivo Solution: A unified marketplace with 2,500+ verified vendors across 6 categories, complete with ratings, reviews, pricing transparency, and portfolio galleries — all searchable with advanced filters.

Problem 2: No Price Transparency

Vendors quote arbitrary prices based on the customer's perceived budget. Customers have no benchmark to compare or negotiate effectively.

Festivo Solution: Every vendor listing displays upfront pricing (per event, per plate, per day). Customers can compare side-by-side and filter by budget range before making contact.

Problem 3: Trust & Verification Gap

Anyone can claim to be a vendor. There is no background check or quality verification, leading to unreliable service and last-minute cancellations.

Festivo Solution: A verification system with badges (Verified, Top Rated, Premium). Vendors undergo background checks. Reviews are from confirmed bookings only.

Problem 4: No Booking System

Bookings are done via phone calls and WhatsApp messages. No contracts, no confirmations, no payment protection. Disputes are common.

Festivo Solution: A complete digital booking system with multi-step forms, automated booking references, secure payment processing, and a confirmation page with full event details.

Problem 5: Vendors Lack Digital Presence

Small vendors (decorators, DJs, caterers) have no way to reach customers online. They depend on referrals and lose business to larger competitors.

Festivo Solution: A dedicated Vendor Dashboard where vendors can showcase their portfolio, receive bookings, track revenue, and manage their profile — all for free.

3. Why People Will Use Festivo

Festivo is designed around real user needs. Here is why both customers and vendors will choose this platform over traditional methods:

For Customers

One-Stop Platform

Find venues, caterers, photographers, decorators, and entertainers — all in one place. No more juggling 10 different contacts.

Verified Reviews

Every review comes from a confirmed booking. No fake reviews, no inflated ratings. Trust is earned, not bought.

Instant Booking

Book any vendor in under 60 seconds. Fill a simple form, confirm, and receive an instant booking reference.

Budget Control

Filter vendors by price range. See exact costs upfront. No hidden charges, no surprises.

Visual Showcase

Browse vendor portfolios with high-quality photos. See exactly what you are paying for before you book.

Free Cancellation

Plans change. Festivo offers free cancellation up to 24 hours before the event with full refund protection.

For Vendors

Digital Storefront

Create a professional profile with portfolio, pricing, and service details in minutes — no website needed.

Reach 50,000+ Customers

Get discovered by active event planners searching for your exact services in your city.

Booking Management

Receive, track, and manage all bookings from a single dashboard. No more lost WhatsApp messages.

Revenue Tracking

Monitor monthly earnings, booking trends, and customer ratings with real-time analytics.

Competitive Advantage

Unlike existing platforms that charge vendors for listings or take heavy commissions, Festivo offers free vendor registration with no upfront costs. The verification badge system creates a trust layer that competitors lack.

4. Technology Stack

Festivo is built with modern, industry-standard technologies chosen for performance, scalability, and developer experience:

React 18 UI Framework	TypeScript Type Safety	Vite Build Tool
Tailwind CSS Styling	Supabase Database & Auth	PostgreSQL Database Engine
React Router Navigation	Lucide React Icon System	Pexels API Stock Imagery

Architecture Overview

- **Frontend:** Single-page application (SPA) built with React 18 + TypeScript, compiled with Vite for fast hot-module reloading and optimized production builds
- **Styling:** Tailwind CSS with a custom design system — 6 color ramps, 8px spacing grid, custom animations (fade-up, scale-in, float, shimmer, hero-text), glassmorphism effects, and gradient orbs
- **Backend:** Supabase (PostgreSQL) provides the database, authentication, row-level security (RLS), and real-time data sync
- **Auth:** Supabase Auth with email/password, session management via AuthContext, and role-based access (customer/vendor)
- **Routing:** React Router v6 with 8 routes covering home, explore, vendors, vendor detail, booking, confirmation, auth, and vendor dashboard

Design System

- **Fonts:** Playfair Display (headings), Inter (body), DM Sans (UI elements)
- **Colors:** Primary (rose-600), Secondary (brand-500), Accent (gold-400), Success (emerald), Warning (amber), Error (red), plus full neutral ramp
- **Components:** Glassmorphism cards, gradient buttons with glow shadows, 3D tilt cards, parallax images, scroll-triggered animations
- **Responsive:** Breakpoints at 640px (sm), 768px (md), 1024px (lg), with mobile-first layout strategy

5. Homepage & Landing Experience

The homepage is designed to make a powerful first impression. It features a full-screen hero with auto-rotating background slides, a smart search bar, and a clear call-to-action that guides users toward the Explore page.

Figure 5.1 — Hero section with rotating background slideshow and search bar

Hero Section Features

- 3-slide auto-rotating background with smooth scale transitions
- Search bar with event type dropdown, city input, and date picker
- Quick-tag buttons for common event types (Wedding, Corporate, Birthday, Anniversary)
- "Explore Showcase" button that navigates to the Explore page
- Live stats row showing 50K+ clients, 2.5K+ vendors, 4.9 rating
- Animated scroll indicator at the bottom

Services Section

Six service categories are displayed as image cards with icons, descriptions, and vendor counts. Clicking any card navigates to the filtered vendors listing page.

Figure 5.2 — Services grid with 6 categories

Occasions Section

A grid of occasion-based cards helps users find vendors specific to their event type — from weddings to baby showers.

Figure 5.3 — Occasions grid with hover effects and badges

How It Works Section

A 4-step visual guide explains the process: Browse & Discover, Plan Your Event, Book with Confidence, and Celebrate Perfectly.

Figure 5.4 — How It Works section with gradient step icons

Testimonials & CTA

Customer testimonials build trust, followed by a call-to-action section encouraging users to download the app or start planning.

Figure 5.5 — Testimonials section with customer reviews

6. Explore Page — Slideshow & Categories

The Explore page is a visual showcase designed to inspire users. It features a full-screen auto-playing slideshow, interactive 3D tilt cards, parallax scrolling, and a live vendor grid.

Figure 6.1 — Explore page full-screen slideshow with auto-play and progress indicators

Slideshow Features

- 5 showcase slides (Royal Weddings, Corporate Galas, Luxury Venues, Live Entertainment, Gourmet Catering)
- Auto-advances every 5 seconds with smooth crossfade and scale transitions
- Progress bar indicators show timing for each slide
- Keyboard navigation (left/right arrow keys)
- Click-to-jump dot indicators with auto-play pause on interaction
- Each slide has glassmorphism stat cards and category-specific CTA buttons

Figure 6.2 — Category browse grid with 3D tilt card effects

3D Tilt Cards

Category cards respond to mouse movement with realistic 3D perspective transforms. As the cursor moves across a card, it tilts in real-time, creating a tactile, premium feel.

Parallax Scrolling

The "Why Festivo" section features a parallax image that moves at a different speed than the page scroll, creating depth and visual interest.

Figure 6.3 — Features section with parallax image and scroll-triggered animations

Top Rated Vendors Grid

A live grid of the highest-rated vendors is pulled from the Supabase database, sorted by rating. Each card shows the vendor's image, name, location, rating, price, and a direct booking button.

Figure 6.4 — Top rated vendors grid with live database data

7. Vendors Listing & Filtering

The Vendors page provides a comprehensive listing of all vendors with powerful filtering and sorting capabilities.

Figure 7.1 — Vendors listing page with sidebar filters

Filtering Options

- **Category:** Filter by Venue, Catering, Photography, Decoration, Entertainment, or Coordinator
- **Price Range:** Budget, Mid-range, Premium, Luxury
- **Sort:** By rating, price (low to high), price (high to low), or newest
- **Search:** Full-text search across vendor names and tags
- **City:** Filter by location (Mumbai, Delhi, Bangalore, etc.)

Vendor Cards

Each card displays the vendor's hero image, category badge, verification status, rating with review count, location, tags, and price. A like button allows users to save favorites. Clicking a card opens the vendor detail page.

8. Vendor Detail Page

Each vendor has a dedicated detail page showcasing their full portfolio, services, pricing, and booking options.

Figure 8.1 — Vendor detail page with gallery and booking CTA

Detail Page Components

- **Image Gallery:** Multiple portfolio photos with navigation
- **Vendor Info:** Name, category, location, rating, verification badge
- **Pricing:** Transparent pricing with unit (per event, per plate, per day)
- **Tags & Amenities:** Key features like "Air Conditioned", "500 Guests", "Parking"
- **Description:** Full vendor bio and service details
- **Book Now Button:** Direct navigation to the booking form

9. Booking System

The booking system is a multi-step form that guides customers through providing event details, contact information, and payment — resulting in an instant booking confirmation.

Why Book on Festivo?

Verified & background-checked vendors

Instant booking confirmation via email

Secure end-to-end encryption

Free cancellation within 24 hours

Dedicated support throughout

Figure 9.1 — Multi-step booking form with payment details

Booking Flow

- Event Details:** Select event type (Wedding, Birthday, Corporate, etc.), date, number of guests, and special requests
- Customer Information:** Name, email, phone number
- Payment:** Card number, expiry, CVV with real-time formatting and validation
- Confirmation:** Instant booking reference number, full event summary, and next steps

Booking Reference System

Each booking generates a unique reference code (e.g., FEST-AB1234) that customers can use to track their booking. The confirmation page displays the full booking details, vendor information, and payment status.

10. Authentication & Role Selection

Festivo features a dual-role authentication system. When users sign up, they are presented with a role selection popup that asks whether they are joining as a Customer or a Vendor — each path provides a tailored experience.

Figure 10.1 — Sign In page with split-screen design

Sign In Page Features

- Split-screen layout with rotating image slideshow on the left
- Tab switcher between Sign In and Sign Up modes
- Password visibility toggle
- Inline validation with error messages
- Loading states with spinner animation
- Social proof — avatar stack and "50,000+ happy users" text

Figure 10.2 — Sign Up form with role selection prompt

Role Selection Popup

After entering their details on the Sign Up form, users see a modal popup that asks: "I am joining as a..." with two clear options:

Customer Account

For users who want to plan and book events. Features: access to 2,500+ vendors, save favorites, compare prices, instant booking, free cancellation, and buyer protection.

Vendor Account

For service providers. Features: create a vendor profile, showcase portfolio, get discovered by thousands of planners, receive and manage bookings, track revenue, and earn a verified badge.

Authentication Flow

1. User enters name, email, and password on the Sign Up form
2. Clicking "Continue" opens the role selection modal
3. User selects Customer or Vendor and clicks "Create Account"
4. Supabase creates the auth user and a profile record with the selected role
5. Customer is redirected to /vendors, Vendor is redirected to /vendor-dashboard
6. Subsequent sign-ins recognize the role and route accordingly

Security Implementation

Authentication is powered by Supabase Auth with industry-standard email/password hashing. Row-Level Security (RLS) policies ensure users can only read and modify their own profile data. Session tokens are managed automatically by the Supabase client.

11. Vendor Dashboard

Vendors get a dedicated dashboard with real-time analytics, booking management, and profile controls.

Dashboard Tabs

- **Overview:** Stats cards (Total Bookings, This Month, Avg Rating, Total Revenue), recent bookings list, and my listings sidebar
- **Bookings:** Full sortable table of all bookings with customer details, event info, and status badges (Confirmed, Pending, Cancelled)
- **Profile:** Account settings showing name, email, role, and sign-out option

Access Control

The dashboard is protected by role-based access. Only users with the "vendor" role can access /vendor-dashboard. Customers are automatically redirected to the vendors listing page. Unauthenticated users are redirected to the sign-in page.

Vendor Onboarding

New vendors see an empty state with a clear call-to-action: "Create your first vendor listing to start receiving bookings from thousands of event planners." The listing creation flow guides them through adding photos, pricing, and service details.

12. Mobile Responsiveness

Festivo is built mobile-first. Every page is fully responsive and tested across viewport sizes from 390px (iPhone 14) to 1440px+ (desktop).

Figure 12.1 — Homepage on mobile (390px)

Figure 12.2 — Vendors list on mobile (390px)

Mobile Design Features

- Hamburger menu with slide-down navigation panel
- Single-column layouts on small screens, multi-column on larger
- Touch-friendly button sizes (minimum 44px tap targets)
- Responsive images that load at appropriate resolutions
- Adaptive typography that scales with viewport

- Mobile auth page hides the image panel and shows a centered form

The image shows a mobile authentication page for 'Festivo'. At the top left is a back arrow and the text 'Home'. The main content is centered on a white card. It starts with the Festivo logo (a red square with a white star) and the brand name 'Festivo'. Below this is a large heading 'Welcome back!' followed by the text 'Sign in to access your bookings and events.' There are two buttons: 'Sign In' in red and 'Sign Up' in light blue. The 'Email Address' section has a text input field with an envelope icon and the placeholder 'you@example.com'. The 'Password' section has a text input field with a lock icon, the placeholder 'Your password', and an eye icon for toggling visibility. A red link 'Forgot password?' is positioned below the password field. A large red button with the text 'Sign In →' is centered below the password field. At the bottom, a line of text states 'By continuing, you agree to Festivo's Terms & Privacy Policy.', with 'Terms' and 'Privacy Policy' as red links.

13. Database Architecture

Festivo uses Supabase (PostgreSQL) as its database backend with three core tables and Row-Level Security enabled on all tables.

Tables

Vendors Table

Stores all vendor listings with their details, pricing, ratings, and gallery images.

```
id (uuid, PK) | name (text) | category (text) | location (text)
price_amount (numeric) | price_label (text) | price_unit (text)
rating (numeric) | reviews (integer) | image (text) | gallery (text[])
tags (text[]) | description (text) | verified (boolean)
badge (text) | badge_color (text) | capacity (text)
experience_years (integer) | slug (text, unique) | created_at (timestampz)
```

Bookings Table

Stores all booking records with customer details, event info, and payment status.

```
id (uuid, PK) | vendor_id (uuid, FK) | customer_name (text)
customer_email (text) | customer_phone (text) | event_type (text)
event_date (date) | guests (integer) | special_requests (text)
total_amount (numeric) | status (text) | payment_status (text)
payment_intent_id (text) | booking_ref (text, unique) | created_at (timestampz)
```

Profiles Table

Stores user profile data with role information (customer/vendor), linked to Supabase Auth.

```
id (uuid, PK, references auth.users) | full_name (text)
role (text: 'customer' | 'vendor') | phone (text)
city (text) | avatar_url (text) | created_at (timestampz)
```

Row-Level Security (RLS)

All tables have RLS enabled with the following policies:

- **Profiles:** Users can SELECT, INSERT, and UPDATE only their own profile (`auth.uid() = id`)
- **Vendors:** Publicly readable (no auth required for browsing), vendor-specific write access
- **Bookings:** Authenticated users can create bookings; vendors can view bookings for their listings

14. How It Works — User Flow

Festivo provides two distinct user journeys, one for customers and one for vendors.

Customer Journey

1. **Land on Homepage** — User arrives at the Festivo homepage, sees the hero slideshow and search bar
2. **Explore or Search** — User clicks "Explore Showcase" to browse the visual slideshow, or uses the search bar to find specific services
3. **Browse Vendors** — User navigates to the Vendors page, filters by category, price, and city, compares options
4. **View Vendor Detail** — User clicks a vendor card to see full portfolio, pricing, and description
5. **Book Service** — User clicks "Book Now", fills the multi-step booking form with event details and payment
6. **Receive Confirmation** — User sees the confirmation page with booking reference and event summary
7. **Create Account (Optional)** — User can sign up as a Customer to save favorites and track bookings

Vendor Journey

1. **Sign Up** — Vendor visits the auth page and creates an account
2. **Select Vendor Role** — In the role selection popup, vendor selects "Vendor" and confirms
3. **Access Dashboard** — Vendor is automatically redirected to the Vendor Dashboard
4. **Create Listing** — Vendor creates their first listing with photos, pricing, and service details
5. **Receive Bookings** — Customer bookings appear in the dashboard's Bookings tab
6. **Manage & Track** — Vendor monitors revenue, ratings, and booking status from the Overview tab

Page Flow Diagram

Homepage → Explore → Vendors Listing → Vendor Detail → Booking → Confirmation

Auth (Sign Up) → Role Selection → Vendor Dashboard (if vendor) or Vendors Listing (if customer)

15. About the Author

PANGA YASHWANT

Full-Stack Developer & Project Author

PANGA YASHWANT is the developer and architect behind Festivo. This project represents a comprehensive implementation of modern web development practices — combining an intuitive user experience with a robust backend architecture to solve real-world problems in the event planning industry.

Project Scope

- Complete frontend development using React 18, TypeScript, and Tailwind CSS
- Backend architecture with Supabase (PostgreSQL), including database schema design and RLS policies
- Authentication system with dual-role support (Customer/Vendor)
- Responsive design implementation across desktop, tablet, and mobile
- Custom animation system with scroll triggers, 3D tilt effects, and parallax scrolling
- Full booking pipeline from vendor discovery to payment confirmation

Technologies Mastered in This Project

React 18 Components & Hooks	TypeScript Type Safety	Supabase Database & Auth
Tailwind CSS Design System	Vite Build Optimization	PostgreSQL Database Design

Project Outcome

Festivo is a production-ready web application that demonstrates:

- A complete, end-to-end user flow with no dead ends
- Professional-grade UI/UX with thoughtful animations and micro-interactions
- Secure, role-based authentication with database-backed profiles
- Real-time data from a live database with proper error handling
- Mobile-first responsive design tested across multiple viewport sizes
- Clean, maintainable code with proper component organization
